PROFESSIONAL SUMMARY

M.Sc Computer Science graduate (2026) with hands-on experience in CI/CD pipelines, container orchestration, and infrastructure as code. Built and deployed production-grade systems on AWS EKS using Jenkins, GitHub Actions, Docker, Kubernetes, Terraform, and Ansible - monitored with Prometheus and Grafana. Strong grasp of DevOps fundamentals including build pipelines, deployment automation, and cloud infrastructure. Seeking an entry-level Cloud DevOps Engineer role to contribute to real-world automation and infrastructure workflows.

TECHNICAL SKILLS

Programming Languages : Python, Shell Scripting (Bash), SQL
Cloud Platforms : AWS (EC2, S3, IAM, EKS, VPC)
DevOps & CI/CD Tools : Docker, Docker Compose, Kubernetes (EKS, Minikube), Jenkins, Helm, GitHub Actions
Infrastructure as Code : Terraform, Ansible
Monitoring & Observability : Prometheus, Grafana
Databases : MySQL, PostgreSQL, Redis, MongoDB
Version Control & Registries : Git, GitHub, DockerHub
Operating Systems : Linux
Networking : TCP/IP, DNS, HTTP/HTTPS, Load Balancing

PROJECTS

- URL Shortener – Kubernetes DevOps Automation & Monitoring System** 2026
Tech: Python (Flask), Docker, Kubernetes (AWS EKS), Jenkins, Prometheus, Grafana, DockerHub, PostgreSQL
- Deployed a URL Shortener on AWS EKS with auto-scaling and zero-downtime deployments
 - Built a Jenkins CI/CD pipeline to automate Docker builds and deploy to EKS on every code commit
 - Set up Prometheus and Grafana dashboards for live monitoring, cutting incident detection time by 30%
 - Packaged the app using Docker with optimized images for faster startup and smaller size
- SRE Incident Management System** 2026
Tech: FastAPI, MongoDB, PostgreSQL, Redis, React, Docker Compose, Prometheus, Grafana
- Built a high-traffic incident system handling 10,000 signals/sec using Redis to reduce database load
 - Designed an incident lifecycle flow (OPEN→INVESTIGATING→RESOLVED→CLOSED) with auto MTTR tracking
 - Used Redis Streams and async backend to handle heavy traffic without performance drops
 - Containerized 6 services with Docker Compose and added Prometheus + Grafana for live monitoring
- CloudOptima – Multi-Cloud Cost Monitoring Web Application** 2025
Tech: Python, Flask, PostgreSQL, AWS (boto3), Brevo API, Render, Vercel
- Built a cloud cost monitoring platform using AWS boto3, cutting manual tracking effort by 40%
 - Created a REST API with Flask and PostgreSQL to detect idle cloud resources automatically
 - Set up automated email alerts using Brevo API when cloud costs cross defined thresholds
 - Deployed on Vercel and Render with CI/CD pipelines for automated releases

EDUCATION

- Master of Science – Computer Science** 2024 – 2026
Bishop Heber College, Tiruchirappalli, Tamil Nadu | Percentage: 76.50%
- Bachelor of Science – Computer Science** 2021 – 2024
PRIST University, Thanjavur, Tamil Nadu | Percentage: 76.10%

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Introduction to Containers, Kubernetes, OpenShift – IBM (2026)
- Jenkins for Beginners – SimpliLearn (2025)
- Python Programming – Scaler (2025)
- Linux Fundamentals – Alison (2025)
- Docker for Developers – Le Wagon (2025)
